Scientific expertise to be established

Singapore cell therapy expert appointed to WHO expert panel

Mickey Koh, who holds posts in Britain and Singapore, is on biological standardisation panel

Telling stories behind specimens in natural history museum

Key Information

- Mickey Koh, a Singaporean cell therapy expert, has been appointed to a panel by the World Health Organization (WHO) to help establish a scientific framework for the standardisation of biological samples.

- Koh, who is also based in Britain, is currently a professor at the National University of Singapore (NUS) and the Institute of Molecular and Cell Biology (IMCB) in Singapore.

- The move comes as the global community works towards better standards for biological samples in the wake of the COVID-19 pandemic.

- Koh has previously worked on the development of new therapies for cancer and other diseases, and is a leading expert in the field of regenerative medicine.

- The appointment is part of a broader effort by WHO to establish international standards for the standardisation of biological samples, which are crucial for research and development in the biotechnology and pharmaceutical industries.

- Koh will be working with other experts from around the world to develop guidelines for the standardisation of biological samples.

- The aim is to ensure that these samples are of high quality and can be used reliably for research and development.

- The establishment of such standards is crucial for the progress of medical research and the development of new therapies and treatments.

- Koh's expertise in cell therapy and regenerative medicine will be invaluable in this process, as these fields rely heavily on the use of high-quality biological samples.

- The appointment is a testament to the growing recognition of Koh's contribution to the field of biological standardisation.

- This is an opportunity for Koh to make an impact on the global stage and contribute to the advancement of science and medicine worldwide.
